Dear Recruitment Team,

I am writing to express my enthusiastic interest in the Sophomore Summer Business Analyst (SSBA) internship at McKinsey & Company. As a dual-degree student in Electrical and Computer Engineering Honors and Canfield Business Honors at the University of Texas at Austin, I am drawn to opportunities that lie at the intersection of analytical rigor and strategic impact—precisely where McKinsey excels, solving clients’ toughest business problems.

This past summer, I interned at Lendflow, a fintech startup, where I built and deployed production-ready AI agents that now automate over 10,000 monthly customer interactions. Complementing this technical foundation, I was selected from over 200 applicants to join the Texas Venture Group. There, I conduct market research, pitch startups to experienced investors, and write weekly reports on emerging investment trends. These experiences have shaped my ability to think critically about industries and drive value through data-informed decisions.

What excites me most about the SSBA internship at McKinsey is the opportunity to collaborate with colleagues on a project team, contributing to real-world problem-solving, building financial models, and delivering presentations. The chance to work alongside mission-driven teams while tackling industry-specific challenges is deeply compelling. I would be thrilled to bring my analytical skills and collaborative spirit to contribute meaningfully to McKinsey’s work.

Warm Regards,

Dominic Schwarzenbach

Dominic A. Schwarzenbach

Student, Texas ECB Honors

McCombs Business & Cockrell Engineering
